SPCA of Tompkins County 2022 by the Numbers

Helping our Community

LOW-COST SPAY & NEUTER

In 2022 we held **48** low-cost spay/neuter clinics for pet owners in Tompkins County and 17 surrounding counties where low-cost options are not available. A total of **1244** animals were "fixed".

PET FOOD PANTRY

Food insecurity continues to be an issue for both humans and their pets in our community. With donations from individuals and businesses, we've been able to offer a weekly drive-up pet food pantry.

2022 brought fewer food pantry donations from our individual supporters, likely due to increased costs. Frequently we were only able to provide a small amount of food per household, even for folks with multiple pets or who are cat colony caretakers. To meet some of their other needs, we distributed other pet care items we did have available, such as cat litter, dog harnesses, crates, and bedding.

COMMUNITY ASSIST

We provide community assistance to people in Tompkins County who are in a difficult situation and need care for their pets temporarily. In 2022, we provided assistance to community members in 32 different cases, involving 45 animals.

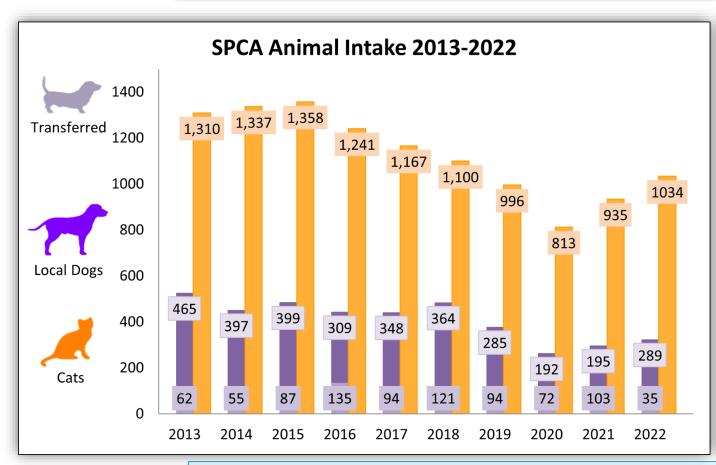

22 DOGS

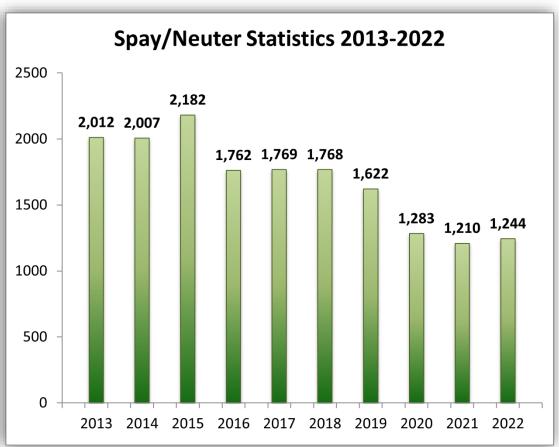

23 CATS

SPCA of Tompkins County

For many years, the number of local cats and dogs who have come to the SPCA needing our help has steadily declined. We credit that reduction, in part, to our efforts to provide low-cost spay/neuter clinics. When more owned cats and dogs in the area are spayed or neutered, the number of unexpected litters decreases. The disruption in the scheduling of the low-cost spay/neuter clinics caused by the pandemic may explain the small increase in local animals coming into our care in 2021 and 2022.

In 2022, 205 feral cats were trap/neuter/return (TNR) through our spay/neuter clinics and shelter surgery days. Between 2015 and 2022, a total of 2,366 feral cats were spayed or neutered. To manage feral cat or large unowned cat colonies, and to prevent unwanted litters, TNR is an incredibly effective solution in managing over-population. Cats are trapped, brought to the SPCA for spay/neuter surgery, given rabies and distemper vaccinations, ear tipped, and tattooed at the surgical site.
